CS 420/520
Data Communication Systems

• Course Overview
  — Instructor:
    • Dr. Axel Krings
    • Office, JEB 320
    • Office Hours to be announced, or by appointment
    • krings@uidaho.edu, (208) 885-4078
    • http://www.cs.uidaho.edu/~krings/CS420
  — Text:
    • Data and Computer Communications, William Stallings,
      Prentice Hall.
  — Grading:
    • CS420: Assignments, Three Exams
    • CS520: Assignments, Three Exams, Term Project

Syllabus and Scope of Course

• We will cover most of the chapters with selected topics from other sources
• This course will introduce you to the concepts, terminology, and approaches used in data communication systems.
• I expect you to walk away from this class being familiar with a wide variety of concepts and protocols (and detailed knowledge of some of them). In the future you should be able to use this knowledge to:
  — make intelligent decisions about network use, design and management,
  — be able to pick up and learn details of a particular system as you need it
  — be able to quickly find protocol descriptions and problem solutions/discussions
  — be able to discuss data communication systems with supervisors and co-workers on the job
A Communications Model

- **Source**
  - generates data to be transmitted
- **Transmitter**
  - Converts data into transmittable signals
- **Transmission System**
  - Carries data
- **Receiver**
  - Converts received signal into data
- **Destination**
  - Takes incoming data

Communications Tasks

<table>
<thead>
<tr>
<th>Transmission system utilization</th>
<th>Addressing</th>
</tr>
</thead>
<tbody>
<tr>
<td>Interfacing</td>
<td>Routing</td>
</tr>
<tr>
<td>Signal generation</td>
<td>Recovery</td>
</tr>
<tr>
<td>Synchronization</td>
<td>Message formatting</td>
</tr>
<tr>
<td>Exchange management</td>
<td>Security</td>
</tr>
<tr>
<td>Error detection and correction</td>
<td>Network management</td>
</tr>
<tr>
<td>Flow control</td>
<td></td>
</tr>
</tbody>
</table>
Simplified Communications Model - Diagram

(a) General block diagram

(b) Example

Simplified Data Communications Model

1. Input information \( m \)
2. Input data \( g(t) \)
3. Transmitted signal \( s(t) \)
4. Received signal \( r(t) \)
5. Output data \( g'(t) \)
6. Output information \( m' \)
**Networking**

- Point to point communication not usually practical
  - Devices are too far apart
  - Large set of devices would need impractical number of connections
- Solution is a communications network, e.g.,
  - Wide Area Network (WAN)
  - Local Area Network (LAN)

**Wide Area Networks**

- Large geographical area
- Crossing public rights of way
- Rely in part on common carrier circuits
- Alternative technologies
  - Circuit switching
  - Packet switching
  - Frame relay
  - Asynchronous Transfer Mode (ATM)
Circuit Switching

- Dedicated communications path established for the duration of the conversation
- e.g., telephone network

Packet Switching

- Small “chunks” (packets) of data at a time
- Data sent may be out of sequence
- Packets passed from node to node between source and destination
- Used for terminal to computer and computer to computer communications
### Frame Relay

- Packet switching systems have large overhead to compensate for errors
- Modern systems are more reliable
- Errors can be caught in end system
- Most overhead for error control is stripped out

### Asynchronous Transfer Mode

- ATM
- Evolution of frame relay
- Little overhead for error control
- Fixed packet (called cell) length
- Anything from Mbps to Gbps
- Constant data rate using packet switching technique
Local Area Networks

- Smaller scope
  - Building or small campus
- Usually owned by same organization as attached devices
- Data rates much higher
- Usually broadcast systems
- Now some switched systems and ATM are being introduced

LAN Configurations

- Switched
  - Switched Ethernet
    - May be single or multiple switches
  - ATM LAN
  - Fibre Channel
- Wireless
  - Mobility
  - Ease of installation
Metropolitan Area Networks

- MAN
- Middle ground between LAN and WAN
- Private or public network
- High speed
- Large area

Networking Configuration
